Sand Technologies

The AL universe offers more than innovative learning, a strong professional network, and a community. It is also a place to connect with opportunities and employers around the world. This is where Sand Technologies comes in – to bridge the gap between emerging organizations, human talent and the resources they need to meet their mandate.

Sand Technologies is a global technology services company with engineers, software architects, UX designers, and product managers based in Silicon Valley, France, the United Kingdom, Romania and various emerging markets. **The company supports scale-ups around the world to develop world-class technology products, build great technology teams, generate more revenue, and deliver outstanding customer experience.**

ALX, The Room and other ALI institutions work hand in hand with Sand Technologies to meet the ever-growing need for tech talent and resources around the world. Every company, whether in tech or a different industry, still needs robust tech expertise to run efficiently.

You won't directly interact with Sand Technologies as part of this course, but you will see the name appear from time to time throughout your ALX journey.
